UNITED STATES DEPARTMENT OF AGRICULTURE DIRECTOR OF EXTENSION WORK

WASHINGTON, D. C.

DIVISION OF COOPERATIVE EXTENSION

May 6, 1938.

Circular Letter Rural Electrification - No. 5

TO STATE AND COUNTY EXTENSION WORKERS:

The Rural Electrification Administration has mailed the enclosed letter and the circular, "Lighting Equipment for the Farm and Farm Home," to its field staff and its project managers. Manufacturers who cooperate in the program are furnishing circular advertising similar sets of modern shaded lighting fixtures at prices in line with the sales advantages resulting from the extension of rural electric line service to scores of new customers in entire communities at one time. The customers may thus buy recommended types of lighting fixtures from their local dealers at a mutually satisfactory price level.

It should be noted that individual fixtures are priced as well as the sets, thus providing sufficient flexibility in selection to assure the expression of individual taste in furnishing the houses, and to allow for variations in numbers of rooms.

Extension workers, whether concerned with the R.E.A. lines or other rural electric lines, will be interested in this aid to farm families for the judicious selection and economic purchase of recommended home and farm lighting equipment. Some time may be required to make the program widely effective. New rural electric customers will appreciate the information that this manner of selection of electric lighting fixtures is becoming available.

Very truly yours,

C. W. Warburton, Director of Extension Work.

LIGHIING EQUIPMENT

FOR THE FARM AND FARM HOME

THIS LEAFLET illustrates the latest approved types of low-cost lamps and fixtures which include the principle of shaded light. This is not a catalog. It is merely a collection of suggestions to assist in the selection of better lighting equipment for the farm and farm home. Consult with your local dealers and distributors to make certain that they handle low-cost fixtures of the types indicated RURAL ELECTRIFICATION ADMINISTRATION

WASHINGTON

MEMORANDUM to Utilization Division Field Representatives:

A NEW SOLUTION
TO
THE LIGHTING PROBLEM

The Problem

Difficulty has been experienced in purchasing lighting fixtures which are attractive and give good lighting results even though the purchaser might be willing to pay relatively high prices. It has been much more difficult to purchase such fixtures at low cost, especially in rural areas. At the same time we know that low cost, efficient and attractive fixtures are available if you know where to go for them. Extensive research has been conducted by many agencies interested in this field. While low cost fixtures have been discovered which are suitable for installation in various rooms of the home, in very few instances have we found manufacturers equipped to supply the complete home with such fixtures. One manufacturer might make suitable equipment for a few rooms but in order to outfit the entire house it might be necessary to purchase from several manufacturers. This made it difficult for the dealers and contractors to meet the needs of the rural market. The first part of the problem, therefore, was to convince manufacturers of possibilities involved if they were to manufacture a complete line of fixtures suitable for the entire farm home.

approach to the farm market. Rural electrification is relatively new and progressing with great rapidity. Manufacturers had not had time to properly analyze this new market and had relied on methods commonly in use in metropolitan centers. That these methods were not satisfactory is evidenced by the fact that in many homes no fixtures were installed but drop cords were used. In the city districts a relatively small proportion of the population is in the market for fixtures. On REA-financed projects, however, all the members are prospective purchasers. A city dealer might have to carry a large expensive stock with a slow turnover. A dealer serving a newly-electrified rural area can carry a smaller stock with a rapid turnover. A new market has been created without expense to dealer or manufacturer. Because of these facts, many manufacturers

MEMORANDUM to Util. Div. Field Rep. -2

felt that some of the savings involved in adopting new methods should be passed on to the farmer.

Consideration was also given to the manner in which the manufacturers' products were presented to the farmer and his family. The general type of catalogues and descriptive literature usually available did not seem sufficient. It seemed desirable to show the farmer that for a certain amount he could light the entire house. This can be most effectively done by offering to the farmer special combinations of fixtures for the entire house in a packaged presentation. If he does not want to buy the fixtures included in the package he has gained an idea of the relative value of fixtures on which to base his judgment as to the desirability of purchasing other types of lighting equipment.

Solution

With the above factors in mind, many conferences were held with manufacturers at which time were discussed the problems involved in adequately serving the rapidly expanding rural market.

Many of those who did not manufacture a complete line of low cost fixtures agreed to augment their lines with suitable devices. A large number of manufacturers said they could outfit a typical six-room house with good shaded lighting fixtures for a cost to the consumer of less than \$20.00. These manufacturers are preparing folders showing fixtures in three price groups, the lowest of which will be less than \$20.00 to the customer. Two of these folders are attached. As rapidly as others are developed they will be sent to you. Attached you will also find a copy of the letter which is being sent to project superintendents.

Material reductions in cost have been made to the farmer. But manufacturers have advised us that the distributors and dealers will receive a reasonable profit.

The Extension Service of the U. S. D. A. has expressed a definite interest in this development and a notification will be sent to all county agents, home demonstration agents, and State workers interested in rural electrification.

Comments

When field representatives are trying to see that dealers handle low cost lighting fixtures, they will no longer have to discuss individual items made by a variety of manufacturers. They can now show the folders describing the special combinations of fixtures. In those areas where it is necessary to find new outlets for fixtures,

felt that some of the cavings involved in adopting new methods should be presed on to the farmer.

Consideration was also given to the names in saids the monutecturers products were presented to the fermer and his finally. The general tyre of catalogues and descriptive itterature usually available did not seem multicient. It seemed desirable to apes the fermer that for a certain amount he could light the surface house. If he cast effectively done by affering to the fermet special combinations of fixtures for the entire nouse in a peckaged presents. The dose not seek to buy the fixtures in the peckaged presents that, it he does not seek to buy the fixtures included in the package he has joined as to buy the relative rolus of fixtured on types of lighting equipment as to ine desirchility of purchasing other types of lighting equipment:

when field representatives are trying to an that deal descent the deal low cost laghting fixtures; they will no longer have to discuss the fittens made by a variety of menufacturers. They can now show the folders describing the appetral combinations of fixtures; in those dress where it is necessary to find new outlets for fixtures;

these folders will show the potential dealer that it is not necessary to order a large, expensive stock, part of which may be difficult to sell. A few of the packages may start him in business. Field representatives should endeavor to see that low cost lighting fixtures are available in all our project areas.

The new package presentation idea should be very helpful in your lighting demonstrations. In those areas where these fixtures are available, the new plan should be discussed in the demonstrations.

A new lighting folder has been prepared by REA and is now in the process of being printed. Copies should be in your hands within a week. This folder, which describes the various types of fixtures suitable in the home and on the farm, can be furnished to the projects for mailing to their customers.

The plan described in this memorandum involves some changes in the methods used by existing fixture dealers. The manufacturers are endeavoring to line up dealers. One manufacturer's sales manager, who is now promoting the idea, reports very gratifying results. It should be borne in mind, however, that the mere announcement of the plan does not mean that it will automatically become effective in all places immediately. It will take a little time. The benefits, however, to customers of REA financed projects will be so great that you should see that the plan is put into effect wherever possible.
